

BLUE TEAM HACKING DEFENSE

TECHNOLOGY SOLUTIONS

We select the best and most innovative technologies to integrate into our defensive security (**BLUE TEAM**) services, with the aim of offering customers the most effective and appropriate solutions for their business needs.

Selecting the right service and the right technological solution to counter risks uncovered by assessment activities (**RED TEAM**) is essential to creating an effective and sustainable security plan.

We collaborate with market leaders to tackle this challenge together.

PROTECTION OF THE LOWER AIRSPACE

VULNERABILITY & RISK MANAGEMENT

DATA PROTECTION, DLP, SECURE FILE SHARING

PROTECTION OF THE WEB APPLICATION

TRAINING AND TOOLS FOR USERS

AUDIT AND CONTROL OF INFRASTRUCTURE AND ACCESS TO DATA

INCIDENT RESPONSE & SIEM

RAPID7

With Head Quarter in Boston (USA), Rapid7 entered the IT market in Cyber Security in 2000. Rapid7 solutions are used by over 3,500 companies in 78 countries and by more than 30% of the companies on the Fortune 1000 list.

Gartner has recognized Rapid7 as a Leader in the 2020 Magic Quadrant for Security Information and Event Management (SIEM) for its completeness of vision and ability to execute.

Rapid7 solutions help companies identify the risks they are exposed to and define a remediation plan focused on the real level of severity.

KnowBe4

Human error. Conquered.

KnowBe4 is the world's largest integrated platform for security awareness training combined with simulated phishing attacks.

Gartner has positioned KnowBe4 highest and furthest overall in the Leaders' Quadrant for our ability to execute and our completeness of vision in the 2019 Magic Quadrant for the Security Awareness Computer-Based Training

KnowBe4 enables your employees to make smarter security decisions, every day.

ITsMine™

ITsMine's Beyond DLP solution is a leading **Data Loss Prevention (DLP)** solution used by organizations to protect against internal and external threats automatically.

Using Artificial Intelligence, behavior analysis, and deception techniques, Beyond DLP™ secures and protects all three stages of digital data.

Beyond DLPTM requires no policies and no permanent endpoint agents, as well as guarantees protection against internal and external attackers. ITsMine's Beyond DLPTM solves the challenges using a fully automated solution with negligible false positives and without affecting employee productivity.

netwrix

Netwrix solutions empower you to **identify and classify sensitive information with utmost precision; reduce your exposure to risk and detect threats in time to avoid data breaches; and achieve and prove compliance.**

The two main solutions Netwrix Auditor and Netwrix Data Discovery & Classification allow you to automatically identify the most sensitive data for the company, monitor its access and modification, as well as for other corporate assets, from Active Directory to services in the Cloud. The easy integration with the IT infrastructure and SIEM systems allow you to have all the important information at your fingertips.

Waratek is an award-winning pioneer in the next generation of application security solutions. Using patented runtime protection technology, Waratek makes it easy for teams to secure business critical applications and securely extend the life of their legacy applications. We provide some of the world's largest brands with:

- Instant patching of known software flaws with Runtime Virtual Patches
- Protecting applications from known and unknown attacks vectors such as the OWASP Top Ten and SANS Top 25
- Virtually upgrading out-of-support Java applications and platforms to the most current version without rewriting the app.

Waratek's Runtime Application Self Protection (RASP) **offers "always-on" protection of your business applications from major web threats, such as OWASP Top 10, SANS 25 or zero-day attacks; the solution allows a quick and simplified installation, which does not require changes to the code or preliminary knowledge of the application.**

Waratek, based in Dublin and Atlanta, in 2017 was awarded the best security software solution by CSO Online and winner of the RSA Innovation Sandbox Award.

The Netsparker Security Scanner is the solution that **allows you to automatically identify any vulnerabilities present in corporate applications, such as XSS and SQL Injection, testing their level of danger.**

In fact, the solution automatically exploits the identified security vulnerabilities, producing a "proof of exploit". This, in addition to giving visibility of the impact of the vulnerability, allows you to verify it is a false positive or not.

Netsparker was born in 2006 from a project by Ferruh Mavituna, leader in the security sector. Tired of spending hours and days manually checking the results of security scans and wasting time with false positives, Ferruh has designed and implemented an end-to-end solution capable of automatically reporting false-positives, resizing the efforts and resources and facilitating the work of the security team.

skilla - Amicucci Formazione is the first Italian e-learning company specialised in the development of solutions, apt to innovate training and internal communication, leader in creativity and design of efficient learning experiences.

skilla is the exclusive method of design, development and consulting conceived by Amicucci Formazione. **skilla Library is the biggest catalog of microlearning Multimedia Learning Pills® (more than 250 on soft skills, available in Italian and English).**

LastPass...|

LastPass is a password manager that allows, through a unique access, to be able to store, create and insert passwords.

Easy to use even for the less experienced, LastPass is a very versatile password manager offering extensions for any type of browser; applications for Android, iOS and Windows devices are also available.

BooleBox by Boole Server is the solution that allows the secure protection and sharing of business documents, through military encryption at the file and e-mail level.

The storage and sharing space of BooleBox can be in the cloud, hosted on the servers of your company or in both ways by choosing the hybrid version.

Through the application of granular security policies, company documents are always under control even when they are shared.

The audit level and encryption make BooleBox the ideal solution to comply with the GDPR requirements.

Drone technology has improved significantly in recent years and today their ability and ease of flight make drones usable for different purposes: rescue, detection, surveillance, deliveries and much more.

However, in the wrong hands its easy accessibility and use make it particularly suitable for less lawful activities, such as physical intrusion, for hacking, surveillance or terrorism purposes.

Dedrone's solutions allow to secure the airspace of organizations from harmful drones, through the use of advanced hardware and software technologies.

Dedrone offers an automated security platform for airborne intrusion detection.

The solution sends early warnings and is suitable for use in the protection of data centers, prisons, airports and other critical structures, from threats such as corporate espionage, smuggling, terrorism and hacking.
